

CAPABILITY STATEMENT

Enterprise Automation Architecture and Private AI

AnnaTech is the consultancy of Krystian Klementowicz, an enterprise architect delivering Pega, UiPath and SAP-integrated automation for a global healthcare-technology enterprise - and the agentic AI systems that come next. Systems run unattended, decisions survive audits, and AI never has to leave your network.

Intelligent Automation

Unattended UiPath and Pega systems for SAP-centric operations: queue-driven, exception-safe, audit-trailed. Seven SAP transaction families automated in production.

AI & Agentic Systems

Background agents and LLM chat inside real workflows: MCP tool layers, permission tiers, guardrails, and LLM code generation validated before it ships.

Private AI / Local LLM

Chat, agents, RAG, voice and image generation on infrastructure you control. Open-weight models, zero external AI APIs. We operate this platform ourselves.

Data Engineering

SAP-to-Snowflake backbone: curated analytical views feeding BPM, RPA and AI consumers from one governed, modeled layer.

TRACK RECORD

50,000+

documents/yr filed into SAP by one unattended process

1,500+

Pega rules architected across 8 business domains

65+

AI validation rules spanning 7 US state form families

8-12 > 2

MFA prompts per transaction after auth re-architecture

30+

MCP agent tools built behind tiered authentication

0

external AI APIs in our private LLM platform

PLATFORMS

Pega 8.x · UiPath · SAP · ServiceNow · Snowflake · Azure Document Intelligence · vLLM · Open WebUI
MCP · Open-weight LLMs (Qwen, Gemma) · Whisper / Piper · Proxmox · Docker · OPNsense / VLAN
